

Performance Improvement Analytics

Driving continual performance improvement

Hospitals and health systems are increasingly exploring ways to improve their performance and quality of care with the goal to reduce operational costs and improve clinical outcomes. Most performance improvement initiatives fall flat over a period of time without yielding the desired outcomes.

Hospitals must design holistic performance improvement initiatives that are meaningful, manageable and measurable in order to drive enterprise-wide improvements.

Analytics that help improve patient outcomes and lower costs

AcesoCloud's PI Analytics solution helps healthcare organizations shift from relying solely on generic reports and dashboards to developing powerful analytic applications that drive effective decision-making throughout the organization.

Serving as a single source of truth through data aggregation, AcesoCloud PI Analytics empowers stakeholders to make data-driven strategic decisions by:

- ◆ Removing data silos
- ◆ Creating transparency
- ◆ Correlating business decisions and patient outcomes

Analytics as a reliable tool: Turning data into action

AcesoCloud PI Analytics is built on a powerful analytics platform that integrates the hospital's data sources and facilitates easy access to data in real time. AcesoCloud offers an enterprise data warehouse (EDW) that aggregates and stores data from disparate sources in a common repository. PI Analytics is a scalable analytic solution based on Agile Methodology and balanced metrics.

Analyze

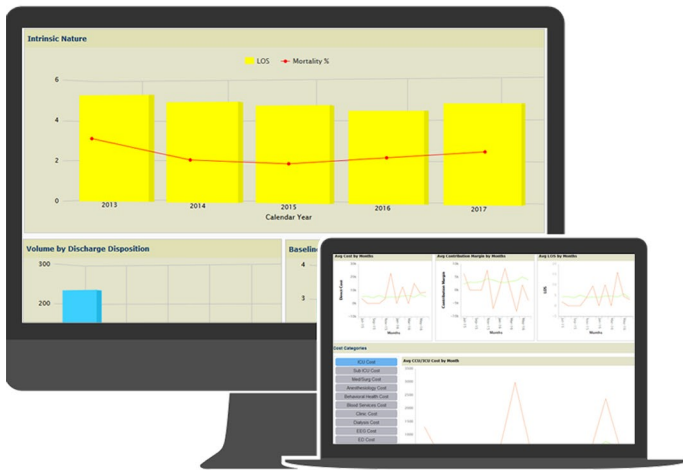

- Gain insights, find trends
- Understand quality matrix
- Analyze cost
- Contribution margins
- Identify improvement areas

Plan

- Define improvement strategy
- List tasks
- Assign teams & targets
- Publish goal matrix
- Measure performance

Optimize

- Improve quality, cut costs
- Reduce inefficiencies
- Automate protocols
- Sustain compliance
- Monitor continuously

Benefits

- ◆ Simplify complex data to identify trends
- ◆ Evaluate clinical performance and quality measures
- ◆ Correlate outcome and cost
- ◆ Mitigate pay-for-performance (P4P) penalties
- ◆ Rank performance of clinical and financial parameters across DRGs and care units

AcesoCloud's customized delivery model ensures rapid time to business value by helping healthcare providers to identify process gaps, and provide preconfigured metrics and benchmarks right out of the box.

About AcesoCloud

AcesoCloud's suite of analytics-driven quality and performance improvement solutions enables healthcare organizations to evaluate programs, identify gaps, track improvement initiatives, measure performance and improve outcomes. The cloud-based solutions allow users to utilize it as a standalone initiative—for assessment and care coordination—or as an enterprise-wide program to realize improved clinical and financial outcomes.
